

# Basic Detail Report

## Title Armchair

Date 1790-1815

Primary Maker Rebecca Wilcox

Description Armchair in the Windsor style, with a continuous bow-back, bamboo-turned posts, legs, and stretchers, and a plank seat. The continuous

# Basic Detail Report

bow back consists of a bow, or a wooden stick, bent in an arch that sweeps

forward at each side to form arms. The bow is supported by eleven slender

spindles of varying height and a three-part bamboo-turned posts at each side.

The arch of the bow is molded with triple beading; the top of the arms are flat.

The continuous bow-back is slanted back; the spindles and posts are joined to

the seat in a semi-circular arrangement. The plank seat is shield shaped and has

a saddled seat, or a has a contoured upper surface with a projecting ridge at the

front center, with flat surface at the back where the bow-back joins the seat. The

sides and front of the plank are chamfered, or cut at an angle. Below the seat are

four turned legs that are raked, or slanted out from top to bottom; each leg has

three-part bamboo turnings. Each side of the chair has a single stretcher with an

ovoid turning in the center. Between the stretcher is a single medial stretcher,

with two-part bamboo turnings. Condition: The joint where the right stretcher

joins the back leg has been re-glued or repaired. The armchair is refinished.

Design and Construction Details: The bow is supported on a through tenon at

the top of each spindle and post. Most of these joints have a small wedge

through the end of the tenon, and six of the eleven are pinned. Each spindle is

tenoned down into the spindle platform. Each post is tenoned down through the

plank seat; each of these also has a wedge through the end of the tenon. The

spindle platform is outlined with a narrow groove. The seat is constructed of a

solid plank of wood and supported on a tenon at the top of each leg. The side

stretchers are tenoned into the lower legs. The medial stretcher is tenoned into

the side stretchers. All the tenons are inserted at an angle, where necessary, to

# Basic Detail Report

give the proper slant to the bow and each of the spindles and legs.

Dimensions Primary Dimensions (overall height x width x depth):  $35 \frac{3}{16} \times 20 \frac{1}{2}$

$\times 19 \frac{11}{16}$ in. (89.4 x 52.1 x 50cm)
