Basic Detail Report

Description Wood panel display for Allen hex-socket screws, wrenches, and

other implements. The panel is a flat board with a framed border. The hardware

is attached to the panel by metal wires and is arranged in symmetrical patterns.

The top row consists of 17 socket head cap screws arranged in descending order

from either side (each side is a mirror image of the other). The second row is

diagonal at either side, comprised of six hex-socket pipe plugs descending from

large to small. In between these descending rows is a vertically-hung "Handi-

hex" screwdriver with a red plastic handle. Next to it are two empty spaces and

wire where other "Handi-hex" or "T-wrenches" would have been displayed. The

third row is made up on the left side by four flat head set screws in descending

size order, and on the right side by four hex-socket shoulder screws. The fourth

row has two diagonally ascending rows of an unknown hex-socket bolt. In the

middle of the panel, between these rows, is a circular display of six types of Allen

"L-wrenches." Below that is a row of eleven dowel pins, with one missing on the

end of each side of the row. The bottom row features 17 unknown hex-socket

screws.

Dimensions Primary Dimensions (height x width x depth): 32 x 20 x 1in. (81.3 x

50.8 x 2.5cm)
