Title Clock Repair Tool Box

Date 1850-1900

Primary Maker Albert G. Walker

Medium Box: Wooden box, painted black, with metal hardware. Tools: Metal, some steel, some with wooden handles. Hardware: Metal, wood, string, glass.

Description Black-painted wooden tool box filled with an assortment of clock repair tools, such as cutting and drilling tools; metal and wooden clock parts;

Basic Detail Report

hardware; and other assorted items. A removable top section divides the

interior of the box into two levels. The removable section is partitioned into six

subsections; the largest and smallest of these sections have no lid, but each of

the other sections do have a wooden lid. Two of these lids have a small wire loop

handle. Beneath the lid of the section in the upper left corner, that section is

partitioned again, with another shallow lidded section inside. The exterior of the

tool box has a metal carrying handle with a wooden grip. An oval of metal is

secured to the center of the top of the box; each end of the metal handle

attaches in a slot on either side of the oval. The top of the tool box is attached by

two hinges at the back side of the box. The front of the box has a crest-shaped

metal keyhole at center front. To either side of the keyhole, an ornate metal

latch on the lid of the box attaches to a flat latch plate secured to the main body

of the box; the latches can pivot upward on hinges.

Dimensions Primary Dimensions: 6 3/8 x 14 7/16 x 10 1/2in. (16.2 x 36.7 x 26.7cm)
