

# Basic Detail Report

## Title Pipe

Date mid 19th century

Medium Mold-formed redware

Description Heavy, thick, unglazed, redware pipe with a hollow, cylindrical center and tapered, exterior form. At the widest end of the pipe, the cylindrical, hollow area is widened to accommodate the narrow end of another length of pipe. A cylindrical hole, 1 1/2 inches in diameter, is located about 5 5/8 inches from the widest end of the pipe; the hole pierces one wall of the pipe but does not extend past the hollow cylindrical center running the length of the pipe. The exterior of the pipe is an uneven red and black color; two mold lines extend the length of the pipe. There are two chips in the redware at the widest end of the pipe, and multiple small chips in the redware at the narrower end of the pipe. An unknown white substance has adhered to the exterior of the narrow end, and the interior of the widest end. The exterior of the pipe is pitted and uneven.

Dimensions Primary Dimensions (length x diameter): 23 1/4 x 4 3/8in. (59.1 x 11.1 cm)
